Subject Index of Volume 27

Accounting architecture

Design of a charging and accounting architecture for QoS-differentiated VPN services to mobile users 364

Active application

CDS: a code distribution scheme for active networks 315

Active measurement

Active/passive combination-type performance measurement method using change-of-measure framework 868

Active networks

CDS: a code distribution scheme for active networks 315

Active queue management

Fair bandwidth sharing between unicast and multicast flows in best-effort networks 330

A fair AQM scheme for aggregated ECN and non-ECN traffic 589

A survey of TCP-friendly router-based AQM schemes 1424

Proportional loss rate differentiation in a FIFO queue 1851

Active queue management (AQM)

Adaptive prediction based approach for congestion estimation (APACE) in active queue management 1647

Ad hoc networks

A novel link state routing protocol and TCP performance investigation in ad hoc networks 187

Impact of caching and MAC overheads on routing performance in ad hoc networks 239

Load balanced routing in mobile ad hoc networks 295

Security for cluster based ad hoc networks 488

Time-stable geocast for ad hoc networks and its application with virtual warning signs 1065

An ad hoc multicast protocol based on passive data acknowledgement 1812

Ad hoc routing protocols

BLR: beacon-less routing algorithm for mobile ad hoc networks 1076

Adaptive de-jitter buffer algorithm with learning

Design and analysis of optimal adaptive de-jitter buffers 529

Adaptive protocol

On the use of adaptive grouping protocols under asymmetric bursty traffic 1137

Adaptive protocols

An adaptive protocol model for IEEE 802.11 wireless LANs 1131

Adaptive rate-queue utilisation AQM

A fair AQM scheme for aggregated ECN and non-ECN traffic 589

Adaptive security

On a framework for energy-efficient security protocols in wireless networks 1716

Admission control

A scalable architecture for end-to-end QoS provisioning 1330

Analysis of deadline assignment methods in distributed real-time systems 1412

AES

SPECSA: a scalable, policy-driven, extensible, and customizable security architecture for wireless enterprise applications 1825

Agents

Applications of agent technology in communications: a review 1493

Alarm clustering

An alarm management framework for automated network fault identification 1341

Alpha-stable distribution

On the testing for alpha-stable distributions of network traffic 447

Anomaly detection

Anomaly detection methods in wired networks: a survey and taxonomy 1569

Anonymous channels

Privacy and authentication protocol providing anonymous channels in GSM 1709

Ant system

Agent-based throughput response in presence of node and/or link failure (on demand) for circuit switched telecommunication networks 230

Application layer mobility management

Analysis of SIP-based mobility management in 4G wireless networks 697

Application level multicast

A survey of application level multicast techniques 1547

Application programmer interfaces

End-to-end quality of service for high-end applications 1375

AR

AR-based quadratic modeling for GOP MPEG-encoded video traffic in ATM networks 81

ATM

Coordination-based optimization of path bandwidth allocation for large-scale telecommunication networks 70

AR-based quadratic modeling for GOP MPEG-encoded video traffic in ATM networks 81

Management of parallel UBR flows over TCP in congested ATM networks 801

Authentication

- Security in third Generation Mobile Networks 638
- GPRS-based WLAN authentication and auto-configuration 739

Authentication protocol

- Privacy and authentication protocol providing anonymous channels in GSM 1709

Automated fault identification

- An alarm management framework for automated network fault identification 1341

Auto-tuning

- User-space auto-tuning for TCP flow control in computational grids 1364

Availability

- Dynamic establishment of differentiated survivable lightpaths in WDM mesh networks 273

Available bandwidth estimation

- Dynamic parameter adjustment for available-bandwidth estimation of TCP in wired–wireless networks 976

Bandwidth aggregation

- LS-SCTP: a bandwidth aggregation technique for stream control transmission protocol 1012

Bandwidth allocation

- An economic model for the radio resource management in multimedia wireless systems 1056

Bandwidth estimation

- TCP Westwood with adaptive bandwidth estimation to improve efficiency/friendliness tradeoffs 41

Bandwidth management

- A bandwidth-based polling scheme for QoS support in Bluetooth 1236

Bandwidth-delay product

- Understanding bandwidth-delay product in mobile ad hoc networks 923

Batch arrivals

- Multiserver queue with semi-Markovian batch arrivals 549

Batch Markovian arrival process

- Traffic splitting in a network: split traffic models and applications 1152

BGP

- Issues with inferring Internet topological attributes 557

Bluetooth

- Improving Bluetooth performance in 802.11 interference environments 616
- An adaptive power-conserving service discipline for bluetooth (APCB) wireless networks 828
- Hybrid wired/wireless implementations of Profibus DP: a feasibility study based on Ethernet and Bluetooth 946
- Performance of Bluetooth bridge scheduling algorithms 1143
- A bandwidth-based polling scheme for QoS support in Bluetooth 1236

Bluetooth scatternet

- Performance of Bluetooth bridge scheduling algorithms 1143

Bluetooth scatternets

- Methods for service discovery in Bluetooth scatternets 1087

Border gateway protocol (BGP)

- Interdomain traffic engineering with redistribution communities 355

Border Gateway Protocol

- Issues with inferring Internet topological attributes 557

Border gateway reservation protocol

- BGRP: Quiet Grafting Mechanisms for Providing a Scalable End-to-End QoS solution 423

Bounded-delay services

- A self-extracting accurate modeling for bounded-delay video services 197

Boyer–Moore algorithm

- A fast string search algorithm for deep packet classification 1524

Broadband wireless access

- Performance evaluation of a broadband wireless access system subjected to heavy load 781

Broadcast scheduling

- Scheduling objects in broadcast systems with energy-limited clients 1036

Broadcast systems

- Scheduling objects in broadcast systems with energy-limited clients 1036

Buffer management scheme

- A resource allocation scheme for capacity improvement in the downlink of wideband CDMA networks 1295

Buffer tuning

- User-space auto-tuning for TCP flow control in computational grids 1364

Byte-Hit-Ratio

- Delay sensitive least frequently used algorithm for replacement in web caches 322

Cache

- Modeling TCP performance with proxies 961

Call admission control

- Admission control in UMTS in the presence of shared channels 1115

Call classification

- Design and analysis of optimal adaptive de-jitter buffers 529

Call loss probabilities

- Performance analysis of a mobile communication network: the tandem case 208

Capacity constraints

- Divisible load scheduling strategies on distributed multi-level tree networks with communication delays and buffer constraints 93

CDMA

- An OVSF code assignment scheme utilizing multiple RAKE combiners for W-CDMA 1617

CDMA-over-TDMA

- An on-demand, link-state, multi-path QoS routing in a wireless mobile ad-hoc network 27

Cellular network

- An economic model for the radio resource management in multimedia wireless systems 1056

Cellular structure

- Optimal channel assignment in wireless communication networks with distance and frequency interferences 1661

Certified mail

A certified mail system (CMS) for the Internet 1229

Change-of-measure

Active/passive combination-type performance measurement method using change-of-measure framework 868

Channel adaptive

Channel adaptive fair queueing for scheduling integrated voice and data services in multicode CDMA systems 809

Chaotic cryptosystems

Breaking network security based on synchronized chaos 1679

Charging

Design of a charging and accounting architecture for QoS-differentiated VPN services to mobile users 364

Class of service

Dynamic establishment of differentiated survivable lightpaths in WDM mesh networks 273

Clinical information

Relational-based calculus for trust management in networked services 1206

Clustering algorithms

Optimising multicast structures for grid computing 1389

Code assignment

An OVSF code assignment scheme utilizing multiple RAKE combiners for W-CDMA 1617

Code distribution protocol

CDS: a code distribution scheme for active networks 315

Code distribution scheme

CDS: a code distribution scheme for active networks 315

Code division multiple access

Channel adaptive fair queueing for scheduling integrated voice and data services in multicode CDMA systems 809

Code reservation

Code reservation schemes at the forward link in WCDMA 792

Communication

On the testing for alpha-stable distributions of network traffic 447

Communication Delay Ratio

Delay sensitive least frequently used algorithm for replacement in web caches 322

Communication delays

Divisible load scheduling strategies on distributed multi-level tree networks with communication delays and buffer constraints 93

Design and analysis of a non-preemptive decentralized load balancing algorithm for multi-class jobs in distributed networks 679

Complex node representation

Optimal PNNI complex node representations for restrictive costs 434

Compression

Joint source-channel coding as an element of a QoS framework for '4G' wireless multimedia 762
Performance considerations for mobile web services 1097

Computer and network security

Anomaly detection methods in wired networks: a survey and taxonomy 1569

Computer communication networks

WFI optimized PWGPS for wireless IP networks 458

Congestion avoidance

MCA: an end-to-end multicast congestion avoidance scheme with feedback suppression 1264

Congestion control

TCP Westwood with adaptive bandwidth estimation to improve efficiency/friendliness tradeoffs 41

Error differentiation with measurements based on wave patterns 989

A survey of TCP-friendly router-based AQM schemes 1424

RoVegas: a router-based congestion avoidance mechanism for TCP Vegas 1624

Adaptive prediction based approach for congestion estimation (APACE) in active queue management 1647

Proportional loss rate differentiation in a FIFO queue 1851

Congestion window limit

Understanding bandwidth-delay product in mobile ad hoc networks 923

Connection preemption

Formulation and optimization of the connection preemption problem 253

Constrained/unconstrained model

The regional movement model for hierarchical mobile IP 1481

Constraint-based routing

QoS evaluation of diffserv-aware constraint-based routing schemes for multi-protocol label switching networks 147

Benefits of traffic engineering using QoS routing schemes and network controls 387

Content distribution network

Modeling content delivery networks and their performance 1401

Content market

Content pricing in the Internet 522

Corridor movements

Performance analysis of a mobile communication network: the tandem case 208

Cost function

Formulation and optimization of the connection preemption problem 253

Crawling

A distributed middleware infrastructure for personalized services 1464

Crossbars

Performance analysis of efficient multipath crossbars 306

Cross-layer feedback

Cross-layer design optimizations in wireless protocol stacks 720

Cross-layer optimization

Cross-layer optimization of OFDM transmission systems for MPEG-4 video streaming 1044

Cryptanalysis

Breaking network security based on synchronized chaos 1679

Cryptographic algorithms

A lightweight identity authentication protocol for wireless networks 1738

Customizable security

SPECSA: a scalable, policy-driven, extensible, and customizable security architecture for wireless enterprise applications 1825

3D visualisation

Real-time carrier network traffic measurement, visualisation and topology modelling 128

Data Encryption Standard (DES)

IPsec-based end-to-end VPN deployment over UMTS 1693

Data management

Network monitoring for GRID performance optimization 1357

Database failure recovery

Backoff strategies for demand re-registration in PCS database failure recovery 400

Deadline assignment

Analysis of deadline assignment methods in distributed real-time systems 1412

Decentralized schemes

Agent-based throughput response in presence of node and/or link failure (on demand) for circuit switched telecommunication networks 230

Decision variable

Formulation and optimization of the connection preemption problem 253

Decomposition-coordination

Coordination-based optimization of path bandwidth allocation for large-scale telecommunication networks 70

Deep packet classification

A fast string search algorithm for deep packet classification 1524

Deficit round Robin

On the latency and fairness characteristics of pre-order deficit round Robin 664

Delay conscious cache replacement algorithm

Delay sensitive least frequently used algorithm for replacement in web caches 322

Desktop computers

The next frontier for communications networks: power management 1758

Deterministic characterization

A self-extracting accurate modeling for bounded-delay video services 197

Differentiated services

Achieving proportional delay differentiation efficiently 153
An adaptive scheduling algorithm for differentiated services on WDM optical networks 857

A mobile differentiated services QoS model 1106

A scalable architecture for end-to-end QoS provisioning 1330

Modeling two-windows TCP behavior in differentiated services networks 1840

DiffServ

QoS evaluation of diffserv-aware constraint-based routing schemes for multi-protocol label switching networks 147

Service quality support—an overview 1539

SLA-based QoS pricing in DiffServ networks 1868

Digital video server system

A gamma fractal noise source model for variable bit rate video servers 1786

Discrete-time batch Markovian arrival process

Traffic splitting in a network: split traffic models and applications 1152

Distributed algorithms

End system multicast: an architectural infrastructure and topological optimization 467

Distributed computing

Coordination-based optimization of path bandwidth allocation for large-scale telecommunication networks 70
Network monitoring for GRID performance optimization 1357

Distributed firewall

Relational-based calculus for trust management in networked services 1206

Distributed real-time system

Analysis of deadline assignment methods in distributed real-time systems 1412

Distributed systems

Design and analysis of a non-preemptive decentralized load balancing algorithm for multi-class jobs in distributed networks 679

Divisible loads

Divisible load scheduling strategies on distributed multi-level tree networks with communication delays and buffer constraints 93

Domain

The regional movement model for hierarchical mobile IP 1481

Drop and continuous

Genetic algorithms for multiple multicast on WDM ring network 840

DS-code-division multiple access

Wireless packet scheduling in an integrated CDMA system using channel status information 890

Dynamic bandwidth allocation

Dynamic bandwidth allocation in multi-class connection-oriented networks 13

Dynamic guard channel

Dynamic handoff scheme in differentiated QoS wireless multimedia networks 1001

Dynamic right-sizing

User-space auto-tuning for TCP flow control in computational grids 1364

e-content

A dynamic pricing scheme for e-content at multiple levels-of-service 374

E-content

Content pricing in the Internet 522

EDF

Analysis of deadline assignment methods in distributed real-time systems 1412

Edge router multicasting

Multicasting in MPLS domains 162

Efficiency friendliness tradeoffs

TCP Westwood with adaptive bandwidth estimation to improve efficiency/friendliness tradeoffs 41

Elastic traffic

Admission control in UMTS in the presence of shared channels 1115

Electronic commerce

Non-repudiation protocols for multiple entities 1608

End system multicast

End system multicast: an architectural infrastructure and topological optimization 467

End-to-end

An end-to-end home network security framework 412

End-to-end delay

Design and analysis of optimal adaptive de-jitter buffers 529

End-to-end QoS

The case for interdomain dynamic QoS-based service negotiation in the internet 622

Energy consumption

On a framework for energy-efficient security protocols in wireless networks 1716

Energy efficiency

On a framework for energy-efficient security protocols in wireless networks 1716

Energy efficient routing

BLR: beacon-less routing algorithm for mobile ad hoc networks 1076

Energy map

The distinctive design characteristic of a wireless sensor network: the energy map 935

Energy-limited clients

Scheduling objects in broadcast systems with energy-limited clients 1036

Error control scheme

Taxonomy and survey of retransmission-based partially reliable transport protocols 1441

Estimate

Evaluation and estimation of second-order self-similar network traffic 898

Exhaustive service scheduling

Performance of Bluetooth bridge scheduling algorithms 1143

Explicit congestion notification

A fair AQM scheme for aggregated ECN and non-ECN traffic 589

Extended connection preemption

Formulation and optimization of the connection preemption problem 253

Fair bandwidth sharing

Fair bandwidth sharing between unicast and multicast flows in best-effort networks 330

Fair exchange

Non-repudiation protocols for multiple entities 1608

Fair packet queueing algorithm

Avoiding useless packet transmission for multimedia over IP networks: the case of multiple multimedia flows 651

Fairness

How to increase the efficiency of receiver-driven adaptive mechanisms in a new generation of IP networks 345
On the latency and fairness characteristics of pre-order deficit round Robin 664

Management of parallel UBR flows over TCP in congested ATM networks 801

Channel adaptive fair queueing for scheduling integrated voice and data services in multicode CDMA systems 809

Wireless packet scheduling in an integrated CDMA system using channel status information 890

A survey of TCP-friendly router-based AQM schemes 1424

Fault recovery

Protection performance components in MPLS networks 1220

Fault-tolerance

Dynamic establishment of differentiated survivable lightpaths in WDM mesh networks 273

Fault-tolerant property

Performance analysis of efficient multipath crossbars 306

FDDI-M

The timely token protocol 569

Feedback suppression

MCA: an end-to-end multicast congestion avoidance scheme with feedback suppression 1264

Fiber distributed data interface

The timely token protocol 569

Fieldbus data link

Hybrid wired/wireless implementations of Profibus DP: a feasibility study based on Ethernet and Bluetooth 946

FIFO

Analysis of deadline assignment methods in distributed real-time systems 1412

Fixed channel allocations

Performance analysis of a mobile communication network: the tandem case 208

Flooding

QROUTE: an QoS-guaranteed multicast routing 171

Flow-control

User-space auto-tuning for TCP flow control in computational grids 1364

Fragmentation

MIG11 priority scheduling with discrete pre-emption points: on the impacts of fragmentation on IP QoS 1183

FTP

User-space auto-tuning for TCP flow control in computational grids 1364

General packet radio service

GPRS-based WLAN authentication and auto-configuration 739

Generalized multi-protocol label switching (GMPLS)

Differentiated multi-layer integrated routing in IP over WDM networks 1594

Generalized processor sharing

Wireless packet scheduling in an integrated CDMA system using channel status information 890

General-purpose Architecture for Reservation and Allocation (GARA)

End-to-end quality of service for high-end applications 1375

Genetic algorithm

- GA-based heuristic algorithms for bandwidth-delay-constrained least-cost multicast routing 111
- Genetic algorithms for multiple multicast on WDM ring network 840

Geocast

- Time-stable geocast for ad hoc networks and its application with virtual warning signs 1065

Good throughput rate at congestion

- MCA: an end-to-end multicast congestion avoidance scheme with feedback suppression 1264

GPRS

- Service quality support—an overview 1539

Green's function

- A resource allocation scheme for capacity improvement in the downlink of wideband CDMA networks 1295

Grid computing

- Optimising multicast structures for grid computing 1389

GRID performance optimization

- Network monitoring for GRID performance optimization 1357

GridFTP

- User-space auto-tuning for TCP flow control in computational grids 1364

Group communications

- Non-repudiation protocols for multiple entities 1608

Group key agreement

- Mutual authentication and group key agreement for low-power mobile devices 1730

Group of pictures

- A gamma fractal noise source model for variable bit rate video servers 1786

Guaranteed QoS

- A QoS-guaranteed multicast routing protocol 59

Guaranteed service model

- An adaptive power-conserving service discipline for bluetooth (APCB) wireless networks 828

Guard channel

- Dynamic handoff scheme in differentiated QoS wireless multimedia networks 1001

3G/UMTS/cdma2000 Networks

- Review of quality of service performance in wireless LANs and 3G multimedia application services 1684

Handoff

- Analysis of SIP-based mobility management in 4G wireless networks 697

Heavy-traffic stochastic-process limits

- Analysis and control of correlated web server queues 1771

Hierarchical mobile IP

- The regional movement model for hierarchical mobile IP 1481

Hierarchical multicast

- Optimising multicast structures for grid computing 1389

High performance

- WFI optimized PWGPS for wireless IP networks 458

High-end applications

- End-to-end quality of service for high-end applications 1375

High-speed network

- Intrusion detection system for high-speed network 1288

HIPERLAN/2

- Evaluation of management functionality for the power control operation of WLAN systems 1670

Hit-Ratio

- Delay sensitive least frequently used algorithm for replacement in web caches 322

Home networks

- An end-to-end home network security framework 412

HYBRID

- A dynamic pricing scheme for e-content at multiple levels-of-service 374

Hybrid network

- Some open issues on internetworking for the next generation 908

IEEE 802.11b

- Security performance of loaded IEEE 802.11b wireless networks 1746

IEEE802.11a

- Evaluation of management functionality for the power control operation of WLAN systems 1670

IEEE802.11h

- Evaluation of management functionality for the power control operation of WLAN systems 1670

IEEE 802.11a/b/g WLANs

- Review of quality of service performance in wireless LANs and 3G multimedia application services 1684

IMT-2000

- An OVSF code assignment scheme utilizing multiple RAKE combiners for W-CDMA 1617

Information network

- Content pricing in the Internet 522

Innocent network element

- An alarm management framework for automated network fault identification 1341

Intelligent mobile agents

- Agent-based throughput response in presence of node and/or link failure (on demand) for circuit switched telecommunication networks 230

Inter-connection network

- A performance anomaly in clustered on-line transaction processing systems 1166

Inter-domain reservation protocol

- BGRP: Quiet Grafting Mechanisms for Providing a Scalable End-to-End QoS solution 423

Interdomain service negotiation

- The case for interdomain dynamic QoS-based service negotiation in the internet 622

Interference

- Optimal channel assignment in wireless communication networks with distance and frequency interferences 1661

Interlayer interaction

- Impact of caching and MAC overheads on routing performance in ad hoc networks 239

Intermediaries

- A distributed middleware infrastructure for personalized services 1464

Internet

- Avoiding useless packet transmission for multimedia over IP networks: the case of multiple multimedia flows 651
- Some open issues on internetworking for the next generation 908
- Mutual authentication and group key agreement for low-power mobile devices 1730

Internet communications

- Joint source-channel coding as an element of a QoS framework for '4G' wireless multimedia 762

Internet Key Exchange (IKE)

- IPsec-based end-to-end VPN deployment over UMTS 1693

Internet mapping

- Issues with inferring Internet topological attributes 557

Internet pricing

- Content pricing in the Internet 522

Internet service provider

- A profitable multicast business model 1278

Internet telephony

- Realizing mobile wireless Internet telephony and streaming multimedia testbed 725

Internet traffic

- Framework based on stochastic L-Systems for modeling IP traffic with multifractal behavior 1799

Intrusion detection

- Intrusion detection system for high-speed network 1288

IP multicast

- Multicast routing for multimedia collaborative applications 604

IP over WDM networks

- Differentiated multi-layer integrated routing in IP over WDM networks 1594

IPsec

- IPsec-based end-to-end VPN deployment over UMTS 1693

IS-41

- An alternative strategy for location update and paging in mobile networks 1509

Java APIs for integrated networks

- External service provision in telecommunications networks using open interfaces 1

Jumping burstiness

- Evaluation and estimation of second-order self-similar network traffic 898

Key management

- Security for cluster based ad hoc networks 488

Label switched path

- Formulation and optimization of the connection preemption problem 253

802.11 LAN

- Improving Bluetooth performance in 802.11 interference environments 616

Latency

- On the latency and fairness characteristics of pre-order deficit round Robin 664

Layer 4 switching

- Accelerating network security services with fast packet classification 1637

Levels-of-service

- A dynamic pricing scheme for e-content at multiple levels-of-service 374

Lightpath

- Wavelength assignment to lightpaths for minimal wavelength conversions in multihop WDM networks 880

Light-tree migration

- Provisioning multicast QoS for WDM-based optical wireless networks 1025

Load distribution

- Divisible load scheduling strategies on distributed multi-level tree networks with communication delays and buffer constraints 93

Local area networks

- On the use of adaptive grouping protocols under asymmetric bursty traffic 1137

Local-area-networks

- The timely token protocol 569

Local route recovery

- An ad hoc multicast protocol based on passive data acknowledgement 1812

Location caching

- Design and analysis of location management schemes for a new light-weight wireless network 743

Location management

- Design and analysis of location management schemes for a new light-weight wireless network 743

Location tracking

- Robust extended Kalman filter based technique for location management in PCS networks 502

Location update

- An alternative strategy for location update and paging in mobile networks 1509

Low-power devices

- Mutual authentication and group key agreement for low-power mobile devices 1730

L-System

- Framework based on stochastic L-Systems for modeling IP traffic with multifractal behavior 1799

MAC protocol

- A scalable and collision-free MAC protocol for all-optical ring networks 1453

Mean response time

- Design and analysis of a non-preemptive decentralized load balancing algorithm for multi-class jobs in distributed networks 679

Medium access control

- Centralized transmission probability control scheme for non-real-time traffic in wireless ATM networks 821
- On the use of adaptive grouping protocols under asymmetric bursty traffic 1137

Medium access control protocol

- Impact of caching and MAC overheads on routing performance in ad hoc networks 239
- An adaptive scheduling algorithm for differentiated services on WDM optical networks 857

Membership information

- Fair bandwidth sharing between unicast and multicast flows in best-effort networks 330

Memory equipped clients

- Scheduling objects in broadcast systems with energy-limited clients 1036

Memoryless clients

- Scheduling objects in broadcast systems with energy-limited clients 1036

Mesh

- A survey of application level multicast techniques 1547

Mesh network

- Traffic splitting in a network: split traffic models and applications 1152

Message Digest (MD5)

- IPsec-based end-to-end VPN deployment over UMTS 1693

Metropolitan area radio access networks

- Modeling mobility and workload for wireless metropolitan area networks 751

MIG11 priority scheduling

- MIG11 priority scheduling with discrete pre-emption points: on the impacts of fragmentation on IP QoS 1183

Mobile

- Realizing mobile wireless Internet telephony and streaming multimedia testbed 725

Mobile ad-hoc network

- An on-demand, link-state, multi-path QoS routing in a wireless mobile ad-hoc network 27

Mobile ad hoc networks

- Node density and connectivity properties of the random waypoint model 914
- Understanding bandwidth-delay product in mobile ad hoc networks 923
- BLR: beacon-less routing algorithm for mobile ad hoc networks 1076

Mobile ad hoc networkings

- An adaptive protocol model for IEEE 802.11 wireless LANs 1131

Mobile commerce

- SPECSA: a scalable, policy-driven, extensible, and customizable security architecture for wireless enterprise applications 1825

Mobile communication

- A mobile differentiated services QoS model 1106

Mobile communication networks

- Performance analysis of a mobile communication network: the tandem case 208

Mobile communications

- Modeling mobility and workload for wireless metropolitan area networks 751
- Applications of agent technology in communications: a review 1493

Mobile computing

- An on-demand, link-state, multi-path QoS routing in a wireless mobile ad-hoc network 27

Mobile device

- Cross-layer design optimizations in wireless protocol stacks 720

Mobile network

- Probability criterion paging area planning in future mobile communications systems 581

Mobile networking

- Design and analysis of location management schemes for a new light-weight wireless network 743

Mobile security

- Security in third Generation Mobile Networks 638

Mobile wireless networks

- A novel link state routing protocol and TCP performance investigation in ad hoc networks 187

Mobility and security

- Design of a charging and accounting architecture for QoS-differentiated VPN services to mobile users 364

Mobility management

- An alternative strategy for location update and paging in mobile networks 1509

Mobility modeling

- Modeling mobility and workload for wireless metropolitan area networks 751

Mobility modelling

- Robust extended Kalman filter based technique for location management in PCS networks 502

Mobility models

- Node density and connectivity properties of the random waypoint model 914

Modeling accuracy

- A self-extracting accurate modeling for bounded-delay video services 197

Modeling and simulation

- An adaptive protocol model for IEEE 802.11 wireless LANs 1131

Modeling and simulation

- Modeling content delivery networks and their performance 1401

MPEG-2

- Avoiding useless packet transmission for multimedia over IP networks: the case of multiple multimedia flows 651

MPEG video

- A self-extracting accurate modeling for bounded-delay video services 197

MPLS

- Proactive resource provisioning 1174

Multicast

- A QoS-guaranteed multicast routing protocol 59
- Multicasting in MPLS domains 162
- MCA: an end-to-end multicast congestion avoidance scheme with feedback suppression 1264
- A profitable multicast business model 1278
- An ad hoc multicast protocol based on passive data acknowledgement 1812

Multicast fairness

Fair bandwidth sharing between unicast and multicast flows in best-effort networks 330

Multicast routing

GA-based heuristic algorithms for bandwidth-delay-constrained least-cost multicast routing 111

Multi-class Network

Dynamic bandwidth allocation in multi-class connection-oriented networks 13

Multicode

Channel adaptive fair queueing for scheduling integrated voice and data services in multicode CDMA systems 809

Multiconstrained Steiner tree

GA-based heuristic algorithms for bandwidth-delay-constrained least-cost multicast routing 111

Multifractal

Framework based on stochastic L-Systems for modeling IP traffic with multifractal behavior 1799

Multi-homing

LS-SCTP: a bandwidth aggregation technique for stream control transmission protocol 1012

Multi-layer integrated routing (MLIR)

Differentiated multi-layer integrated routing in IP over WDM networks 1594

Multimedia

Realizing mobile wireless Internet telephony and streaming multimedia testbed 725
Joint source-channel coding as an element of a QoS framework for '4G' wireless multimedia 762

Multimedia communications

Multicast routing for multimedia collaborative applications 604

Multimedia over IP

Avoiding useless packet transmission for multimedia over IP networks: the case of multiple multimedia flows 651

Multimedia over wireless networks

Review of quality of service performance in wireless LANs and 3G multimedia application services 1684

Multimedia streaming

Designing and implementing a new type of transport-layer socket: the UDTCP socket case 262
Hierarchical analysis of RealMedia streaming traffic on an IEEE 802.11b wireless LAN 538

Multi-path

An on-demand, link-state, multi-path QoS routing in a wireless mobile ad-hoc network 27

Multi-pattern matching

Intrusion detection system for high-speed network 1288

Multiple multicasts

Genetic algorithms for multiple multicast on WDM ring network 840

Multi-protocol label switching

QoS evaluation of diffserv-aware constraint-based routing schemes for multi-protocol label switching networks 147
Multicasting in MPLS domains 162
Protection performance components in MPLS networks 1220

Multiprotocol label switching networks

Formulation and optimization of the connection preemption problem 253

Multiscaling

Framework based on stochastic L-Systems for modeling IP traffic with multifractal behavior 1799

Multiserver queue

Multiserver queue with semi-Markovian batch arrivals 549

Multiuser receivers

Admission control in UMTS in the presence of shared channels 1115

Netflow Exports

Real-time carrier network traffic measurement, visualisation and topology modelling 128

Network Address Translation (NAT)

IPsec-based end-to-end VPN deployment over UMTS 1693

Network implementation

QROUTE: an QoS-guaranteed multicast routing 171

Network intrusion detection

Anomaly detection methods in wired networks: a survey and taxonomy 1569

Network management

An economic model for the radio resource management in multimedia wireless systems 1056
Applications of agent technology in communications: a review 1493
Anomaly detection methods in wired networks: a survey and taxonomy 1569

Network modeling

On the testing for alpha-stable distributions of network traffic 447

Network monitoring

Network monitoring for GRID performance optimization 1357

Network performance

Protection performance components in MPLS networks 1220

Network performance metrics

Network monitoring for GRID performance optimization 1357

Network security

Security for cluster based ad hoc networks 488
Accelerating network security services with fast packet classification 1637
Breaking network security based on synchronized chaos 1679

Network security performance

Security performance of loaded IEEE 802.11b wireless networks 1746

Network simulation modeling

QROUTE: an QoS-guaranteed multicast routing 171

Network traffic

Evaluation and estimation of second-order self-similar network traffic 898

Network traffic measurement

Hierarchical analysis of RealMedia streaming traffic on an IEEE 802.11b wireless LAN 538

Network-wise performance

Traffic splitting in a network: split traffic models and applications 1152

Non-linear model

AR-based quadratic modeling for GOP MPEG-encoded video traffic in ATM networks 81

Non-preemptive scheduling

Design and analysis of a non-preemptive decentralized load balancing algorithm for multi-class jobs in distributed networks 679

Non-repudiation

A certified mail system (CMS) for the Internet 1229
Non-repudiation protocols for multiple entities 1608

On-line transaction processing

A performance anomaly in clustered on-line transaction processing systems 1166

Open architecture

External service provision in telecommunications networks using open interfaces 1

Open service access and parlay

External service provision in telecommunications networks using open interfaces 1

Operating system

Designing and implementing a new type of transport-layer socket: the UDTCP socket case 262

Optical networks

An adaptive scheduling algorithm for differentiated services on WDM optical networks 857

Optical networks performance evaluations

A computer aided tool for the performance evaluation of next generation WDM wavelength-routed optical networks 1197

Optical ring network

A scalable and collision-free MAC protocol for all-optical ring networks 1453

Optical router

Differentiated multi-layer integrated routing in IP over WDM networks 1594

Optical wireless network

Provisioning multicast QoS for WDM-based optical wireless networks 1025

Optimal channel assignment

Optimal channel assignment in wireless communication networks with distance and frequency interferences 1661

Orthogonal frequency division multiplexing

Cross-layer optimization of OFDM transmission systems for MPEG-4 video streaming 1044

Orthogonal variable spreading factor codes

Code reservation schemes at the forward link in WCDMA 792

Overhead

Performance considerations for mobile web services 1097

Overlay

A survey of application level multicast techniques 1547

Overlay networks

Optimising multicast structures for grid computing 1389

OVSF

An OVSF code assignment scheme utilizing multiple RAKE combiners for W-CDMA 1617

Packet capture

Intrusion detection system for high-speed network 1288

Packet classification

Accelerating network security services with fast packet classification 1637

Packet loss probability

Design and analysis of optimal adaptive de-jitter buffers 529

Packet scheduling

On the latency and fairness characteristics of pre-order deficit round Robin 664

Packet switching

A parallel packet switch with multiplexors containing virtual input queues 1248

Paging areas

Probability criterion paging area planning in future mobile communications systems 581

Parallel packet switches

A parallel packet switch with multiplexors containing virtual input queues 1248

Pareto distribution

A scalable and collision-free MAC protocol for all-optical ring networks 1453

Partial reliability

Taxonomy and survey of retransmission-based partially reliable transport protocols 1441

Passive measurement

Active/passive combination-type performance measurement method using change-of-measure framework 868

Path bandwidth allocation

Coordination-based optimization of path bandwidth allocation for large-scale telecommunication networks 70

Performance

Performance analysis of a mobile communication network: the tandem case 208

Improving Bluetooth performance in 802.11 interference environments 616

Performance enhancing proxy

Modeling TCP performance with proxies 961

Performance evaluation

Impact of caching and MAC overheads on routing performance in ad hoc networks 239

Performance evaluation of a broadband wireless access system subjected to heavy load 781

An adaptive protocol model for IEEE 802.11 wireless LANs 1131

A performance anomaly in clustered on-line transaction processing systems 1166

Modeling content delivery networks and their performance 1401

A simulation-based performance evaluation of Tahoe, Reno and Sack TCP as appropriate transport protocols for SIP 1585

Modeling two-windows TCP behavior in differentiated services networks 1840

Performance measurements

QROUTE: an QoS-guaranteed multicast routing 171

Personal Communications Services

Backoff strategies for demand re-registration in PCS database failure recovery 400

Personal communications service networks

Robust extended Kalman filter based technique for location management in PCS networks 502

Personalization

A distributed middleware infrastructure for personalized services 1464

Planning algorithm

Probability criterion paging area planning in future mobile communications systems 581

Policy-driven security

SPECSA: a scalable, policy-driven, extensible, and customizable security architecture for wireless enterprise applications 1825

Polling scheme

A bandwidth-based polling scheme for QoS support in Bluetooth 1236

Position-based routing

BLR: beacon-less routing algorithm for mobile ad hoc networks 1076

Power Control

Evaluation of management functionality for the power control operation of WLAN systems 1670

Power management

The next frontier for communications networks: power management 1758

Power-conserving service model

An adaptive power-conserving service discipline for bluetooth (APCB) wireless networks 828

Prediction

The distinctive design characteristic of a wireless sensor network: the energy map 935

Pre-emption

MIGI1 priority scheduling with discrete pre-emption points: on the impacts of fragmentation on IP QoS 1183

Pricing

An economic model for the radio resource management in multimedia wireless systems 1056

Priority-based networks

Formulation and optimization of the connection preemption problem 253

Privacy

Privacy issues in virtual private networks 517

Private Network-to-Network Interface

Optimal PNNI complex node representations for restrictive costs 434

Probabilistic routing

Traffic splitting in a network: split traffic models and applications 1152

Probability of location

Probability criterion paging area planning in future mobile communications systems 581

Processing time

Divisible load scheduling strategies on distributed multi-level tree networks with communication delays and buffer constraints 93

Profile-based location

An alternative strategy for location update and paging in mobile networks 1509

Proportional delay

Achieving proportional delay differentiation efficiently 153

Protocol

A QoS-guaranteed multicast routing protocol 59
Improving Bluetooth performance in 802.11 interference environments 616

Protocol analysis

Intrusion detection system for high-speed network 1288

Protocol design

Designing and implementing a new type of transport-layer socket: the UDTCP socket case 262

Protocol implementation

Designing and implementing a new type of transport-layer socket: the UDTCP socket case 262

Protocol stack

Cross-layer design optimizations in wireless protocol stacks 720

Proxying Ethernet adapter

The next frontier for communications networks: power management 1758

Public key certificate

Relational-based calculus for trust management in networked services 1206

QoS

A bandwidth-based polling scheme for QoS support in Bluetooth 1236
Service quality support—an overview 1539

QoS charging and pricing

SLA-based QoS pricing in DiffServ networks 1868

QoS constraints

A QoS-guaranteed multicast routing protocol 59

QoS multicast

QROUTE: an QoS-guaranteed multicast routing 171

QoS network

Analysis of deadline assignment methods in distributed real-time systems 1412

QoS routing

A QoS-guaranteed multicast routing protocol 59
QROUTE: an QoS-guaranteed multicast routing 171
Applications of agent technology in communications: a review 1493

QoS-differentiated services

Design of a charging and accounting architecture for QoS-differentiated VPN services to mobile users 364

Quality

Service quality support—an overview 1539

Quality of service (QoS)

Differentiated multi-layer integrated routing in IP over WDM networks 1594

Quality of service routing

Benefits of traffic engineering using QoS routing schemes and network controls 387

Quality of service

QoS evaluation of diffserv-aware constraint-based routing schemes for multi-protocol label switching networks 147
Achieving proportional delay differentiation efficiently 153
Multicasting in MPLS domains 162
Dynamic establishment of differentiated survivable lightpaths in WDM mesh networks 273
On the latency and fairness characteristics of pre-order deficit round Robin 664

- Vertical handover supporting pervasive computing in future wireless networks 708

Robust extended Kalman filter

Robust extended Kalman filter based technique for location management in PCS networks 502

Robust Header compression

Joint source-channel coding as an element of a QoS framework for '4G' wireless multimedia 762

Routing

Impact of caching and MAC overheads on routing performance in ad hoc networks 239
Load balanced routing in mobile ad hoc networks 295
Design and analysis of a non-preemptive decentralized load balancing algorithm for multi-class jobs in distributed networks 679
Methods for service discovery in Bluetooth scatternets 1087

Routing and wavelength assignment

A computer aided tool for the performance evaluation of next generation WDM wavelength-routed optical networks 1197

Routing protocols

A novel link state routing protocol and TCP performance investigation in ad hoc networks 187
Multicast routing for multimedia collaborative applications 604

SAPRA

How to increase the efficiency of receiver-driven adaptive mechanisms in a new generation of IP networks 345

Scalability

BGRP: Quiet Grafting Mechanisms for Providing a Scalable End-to-End QoS solution 423

Scheduling

Channel adaptive fair queueing for scheduling integrated voice and data services in multicode CDMA systems 809

Scheduling algorithms

WFI optimized PWGPS for wireless IP networks 458

Second-order self-similarity

Evaluation and estimation of second-order self-similar network traffic 898

Secure mobile

Security for cluster based ad hoc networks 488

Secure protocols

Security for cluster based ad hoc networks 488

Security

A lightweight identity authentication protocol for wireless networks 1738
SPECESA: a scalable, policy-driven, extensible, and customizable security architecture for wireless enterprise applications 1825

Security architecture

Security for cluster based ad hoc networks 488

Security framework

An end-to-end home network security framework 412

Security protocol

Non-repudiation protocols for multiple entities 1608
On a framework for energy-efficient security protocols in wireless networks 1716

Self-configurable tree

A survey of application level multicast techniques 1547

Semi-Markov process

Multiserver queue with semi-Markovian batch arrivals 549

Sensor networks

The distinctive design characteristic of a wireless sensor network: the energy map 935

Service

Service quality support—an overview 1539

Service differentiation

Content pricing in the Internet 522

Service discovery

Methods for service discovery in Bluetooth scatternets 1087

Service level agreement

The case for interdomain dynamic QoS-based service negotiation in the internet 622
Proactive resource provisioning 1174

Service platform

External service provision in telecommunications networks using open interfaces 1

Service provision

External service provision in telecommunications networks using open interfaces 1

Shaper

Minimum TCP throughput guarantee on minimum rate guaranteed networks 1314

Short message service

GPRS-based WLAN authentication and auto-configuration 739

Signaling load decrease

Probability criterion paging area planning in future mobile communications systems 581

Signal-to-noise ratio

Cross-layer optimization of OFDM transmission systems for MPEG-4 video streaming 1044

Signal-to-noise ratio-waveform power adaptation

An adaptive protocol model for IEEE 802.11 wireless LANs 1131

Simulation

QoS evaluation of diffserv-aware constraint-based routing schemes for multi-protocol label switching networks 147
Impact of caching and MAC overheads on routing performance in ad hoc networks 239
Time-stable geocast for ad hoc networks and its application with virtual warning signs 1065
A performance anomaly in clustered on-line transaction processing systems 1166
A computer aided tool for the performance evaluation of next generation WDM wavelength-routed optical networks 1197

Single-hop

Genetic algorithms for multiple multicast on WDM ring network 840

Sink tree

BGRP: Quiet Grafting Mechanisms for Providing a Scalable End-to-End QoS solution 423

SIP

A simulation-based performance evaluation of Tahoe, Reno and Sack TCP as appropriate transport protocols for SIP 1585

Slave/slave bridge

Performance of Bluetooth bridge scheduling algorithms 1143

SOAP

Performance considerations for mobile web services 1097

Source coding

Joint source-channel coding as an element of a QoS framework for '4G' wireless multimedia 762

Source-channel coding

Joint source-channel coding as an element of a QoS framework for '4G' wireless multimedia 762

Spread spectrum

An adaptive protocol model for IEEE 802.11 wireless LANs 1131

Standardized application programming interfaces

External service provision in telecommunications networks using open interfaces 1

State aggregation

Optimal PNNI complex node representations for restrictive costs 434

Static load balancing

Design and analysis of a non-preemptive decentralized load balancing algorithm for multi-class jobs in distributed networks 679

Stations grouping

On the use of adaptive grouping protocols under asymmetric bursty traffic 1137

Stream control transmission protocol

LS-SCTP: a bandwidth aggregation technique for stream control transmission protocol 1012

Streaming

How to increase the efficiency of receiver-driven adaptive mechanisms in a new generation of IP networks 345

Streaming multimedia

Analysis of SIP-based mobility management in 4G wireless networks 697

String search

A fast string search algorithm for deep packet classification 1524

Survey

Taxonomy and survey of retransmission-based partially reliable transport protocols 1441

Survivability

Dynamic establishment of differentiated survivable lightpaths in WDM mesh networks 273

Swarm intelligence

Agent-based throughput response in presence of node and/or link failure (on demand) for circuit switched telecommunication networks 230

Switch architecture

A parallel packet switch with multiplexors containing virtual input queues 1248

Switching network

Performance analysis of efficient multipath crossbars 306

Synchronization

Applications of agent technology in communications: a review 1493

Tandem network

Performance analysis of a mobile communication network: the tandem case 208

Taxonomy

Taxonomy and survey of retransmission-based partially reliable transport protocols 1441

TCP

A novel link state routing protocol and TCP performance investigation in ad hoc networks 187

Load balanced routing in mobile ad hoc networks 295

How to increase the efficiency of receiver-driven adaptive mechanisms in a new generation of IP networks 345

Avoiding useless packet transmission for multimedia over IP networks: the case of multiple multimedia flows 651

Understanding bandwidth-delay product in mobile ad hoc networks 923

Dynamic parameter adjustment for available-bandwidth estimation of TCP in wired-wireless networks 976

Error differentiation with measurements based on wave patterns 989

User-space auto-tuning for TCP flow control in computational grids 1364

A simulation-based performance evaluation of Tahoe, Reno and Sack TCP as appropriate transport protocols for SIP 1585

Adaptive prediction based approach for congestion estimation (APACE) in active queue management 1647

Modeling two-windows TCP behavior in differentiated services networks 1840

TCP congestion control

Proportional loss rate differentiation in a FIFO queue 1851

TCP connection splitting

Modeling TCP performance with proxies 961

TCP connection spoofing

Modeling TCP performance with proxies 961

TCP-friendly

A survey of TCP-friendly router-based AQM schemes 1424

TCP performance

Modeling TCP performance with proxies 961

TCP Vegas

RoVegas: a router-based congestion avoidance mechanism for TCP Vegas 1624

TCP westwood

TCP Westwood with adaptive bandwidth estimation to improve efficiency/friendliness tradeoffs 41

Telecommunication networks

On the testing for alpha-stable distributions of network traffic 447

Telecommunications network

A gamma fractal noise source model for variable bit rate video servers 1786

Third generation systems

Code reservation schemes at the forward link in WCDMA 792

Throughput

- Load balanced routing in mobile ad hoc networks 295
- Management of parallel UBR flows over TCP in congested ATM networks 801
- Minimum TCP throughput guarantee on minimum rate guaranteed networks 1314

Time-division multiple access

- Performance evaluation of a broadband wireless access system subjected to heavy load 781

Time-division multiplexing

- Performance evaluation of a broadband wireless access system subjected to heavy load 781

Timing constraint Petri net

- An alarm management framework for automated network fault identification 1341

TLS

- A lightweight identity authentication protocol for wireless networks 1738

Topology

- Issues with inferring Internet topological attributes 557

Topology aggregation

- Optimal PNNI complex node representations for restrictive costs 434

Topology design

- Real-time carrier network traffic measurement, visualisation and topology modelling 128

Topology optimization

- End system multicast: an architectural infrastructure and topological optimization 467

TPC-C workload

- A performance anomaly in clustered on-line transaction processing systems 1166

Traceroute

- Issues with inferring Internet topological attributes 557

Traffic characteristics

- Performance evaluation of a broadband wireless access system subjected to heavy load 781

Traffic characterization

- The next frontier for communications networks: power management 1758

Traffic engineering

- QoS evaluation of diffserv-aware constraint-based routing schemes for multi-protocol label switching networks 147
- Multicasting in MPLS domains 162
- Interdomain traffic engineering with redistribution communities 355
- Benefits of traffic engineering using QoS routing schemes and network controls 387
- A scalable architecture for end-to-end QoS provisioning 1330

Traffic measurement

- Real-time carrier network traffic measurement, visualisation and topology modelling 128

Traffic modeling

- Framework based on stochastic L-Systems for modeling IP traffic with multifractal behavior 1799

Traffic profile

- SLA-based QoS pricing in DiffServ networks 1868

Traffic splitting

- Traffic splitting in a network: split traffic models and applications 1152

Transmission control protocol

- A fair AQM scheme for aggregated ECN and non-ECN traffic 589
- Minimum TCP throughput guarantee on minimum rate guaranteed networks 1314

Transmission control protocol congestion control

- Management of parallel UBR flows over TCP in congested ATM networks 801

Transmission probability control

- Centralized transmission probability control scheme for non-real-time traffic in wireless ATM networks 821

Transport protocol

- RoVegas: a router-based congestion avoidance mechanism for TCP Vegas 1624

Transport-layer socket

- Designing and implementing a new type of transport-layer socket: the UDTCP socket case 262

Tree networks

- Divisible load scheduling strategies on distributed multi-level tree networks with communication delays and buffer constraints 93

Trust management in communication networks

- Relational-based calculus for trust management in networked services 1206

Trusted third party

- A certified mail system (CMS) for the Internet 1229

Tunable transceiver

- A scalable and collision-free MAC protocol for all-optical ring networks 1453

Tunneling protocols

- Privacy issues in virtual private networks 517

Two classes scheduler mechanism

- Fair bandwidth sharing between unicast and multicast flows in best-effort networks 330

Unicast

- A profitable multicast business model 1278

Universal mobile telecommunication system

- Security in third Generation Mobile Networks 638
- Admission control in UMTS in the presence of shared channels 1115

Universal Mobile Telecommunication System (UMTS)

- IPsec-based end-to-end VPN deployment over UMTS 1693

Un-specified bit rate

- Management of parallel UBR flows over TCP in congested ATM networks 801

Vertical handover

- Vertical handover supporting pervasive computing in future wireless networks 708

Video traffic modeling

- AR-based quadratic modeling for GOP MPEG-encoded video traffic in ATM networks 81

Virtual input queues

- A parallel packet switch with multiplexors containing virtual input queues 1248

Virtual payment services

Relational-based calculus for trust management in networked services 1206

Virtual Private Network (VPN)

IPsec-based end-to-end VPN deployment over UMTS 1693

Virtual private network

Privacy issues in virtual private networks 517
Security in third Generation Mobile Networks 638

Virtual warning sign

Time-stable geocast for ad hoc networks and its application with virtual warning signs 1065

Voice over IP

Proactive resource provisioning 1174

Voice-call quality

Design and analysis of optimal adaptive de-jitter buffers 529

VPN

Design of a charging and accounting architecture for QoS-differentiated VPN services to mobile users 364

Waiting time

Multiserver queue with semi-Markovian batch arrivals 549

WAP

A lightweight identity authentication protocol for wireless networks 1738

Waveform power adaptation

An adaptive protocol model for IEEE 802.11 wireless LANs 1131

Wavelength assignment

Wavelength assignment to lightpaths for minimal wavelength conversions in multihop WDM networks 880

Wavelength conversion

Wavelength assignment to lightpaths for minimal wavelength conversions in multihop WDM networks 880
Provisioning multicast QoS for WDM-based optical wireless networks 1025

Wavelength division multiplexing

Dynamic establishment of differentiated survivable lightpaths in WDM mesh networks 273
A computer aided tool for the performance evaluation of next generation WDM wavelength-routed optical networks 1197
A scalable and collision-free MAC protocol for all-optical ring networks 1453

Wavelength-Division-Multiplexing

An adaptive scheduling algorithm for differentiated services on WDM optical networks 857

Wavelength division multiplexing networks

Wavelength assignment to lightpaths for minimal wavelength conversions in multihop WDM networks 880

Wavelength division multiplexing rings

Genetic algorithms for multiple multicast on WDM ring network 840

WCDMA

Code reservation schemes at the forward link in WCDMA 792

Service quality support—an overview 1539

Web document transmission

Dynamic parameter adjustment for available-bandwidth estimation of TCP in wired-wireless networks 976

Web server scheduling

Analysis and control of correlated web server queues 1771

Web server workloads and performance

Analysis and control of correlated web server queues 1771

Web service

Performance considerations for mobile web services 1097

Weighted fair queueing

Wireless packet scheduling in an integrated CDMA system using channel status information 890

Wideband CDMA

A resource allocation scheme for capacity improvement in the downlink of wideband CDMA networks 1295

Wired-wireless network

Dynamic parameter adjustment for available-bandwidth estimation of TCP in wired-wireless networks 976

Wireless

Improving Bluetooth performance in 802.11 interference environments 616
Channel adaptive fair queueing for scheduling integrated voice and data services in multicode CDMA systems 809
Some open issues on internetworking for the next generation 908

Wireless ATM

Centralized transmission probability control scheme for non-real-time traffic in wireless ATM networks 821

Wireless communication

Joint source-channel coding as an element of a QoS framework for '4G' wireless multimedia 762
BLR: beacon-less routing algorithm for mobile ad hoc networks 1076
Optimal channel assignment in wireless communication networks with distance and frequency interferences 1661

Wireless communications

A lightweight identity authentication protocol for wireless networks 1738

Wireless communication networks

Modeling mobility and workload for wireless metropolitan area networks 751

Wireless Internet

Realizing mobile wireless Internet telephony and streaming multimedia testbed 725

Wireless LAN

GPRS-based WLAN authentication and auto-configuration 739

Wireless LANs

Hierarchical analysis of RealMedia streaming traffic on an IEEE 802.11b wireless LAN 538
An adaptive protocol model for IEEE 802.11 wireless LANs 1131

Wireless LAN security

Security performance of loaded IEEE 802.11b wireless networks 1746

Wireless network

An on-demand, link-state, multi-path QoS routing in a wireless mobile ad-hoc network 27
